

## **Gun Kit Assembly Instructions**

## Electrical Connections

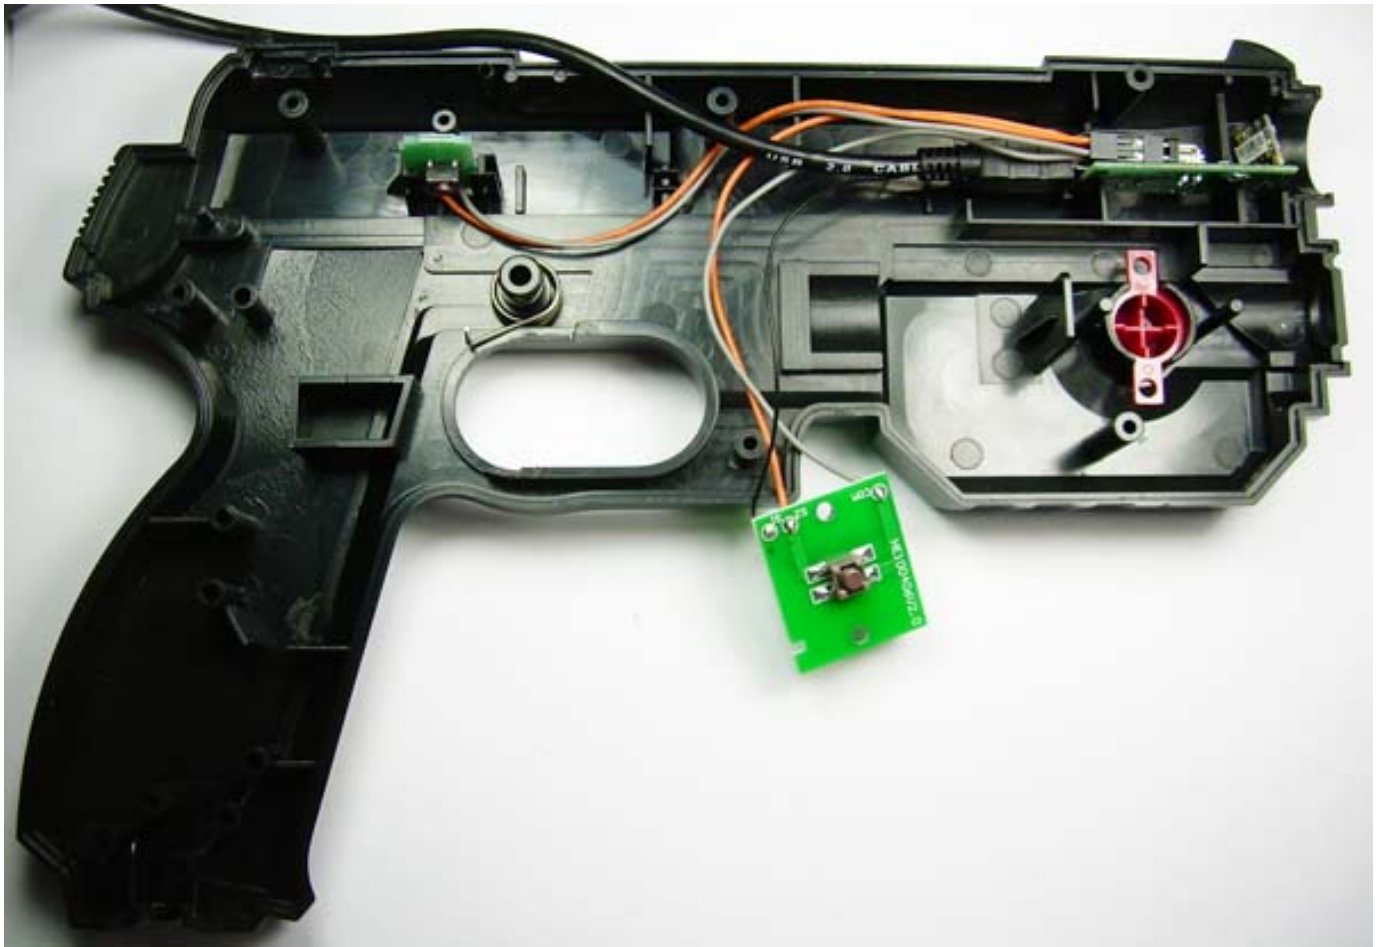

The two PCBs come with wiring already connected. The attached connector simply needs to be plugged into the module.

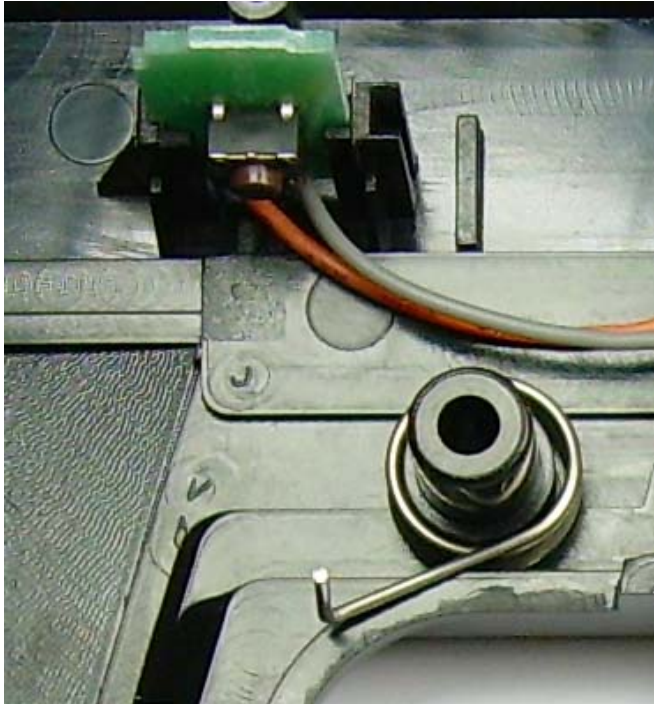

## Gun Housing Assembly

Start with the left side as shown below. Insert the left button, trigger spring, and the module, and the trigger switch PCB.

Spring/Trigger Switch Detail

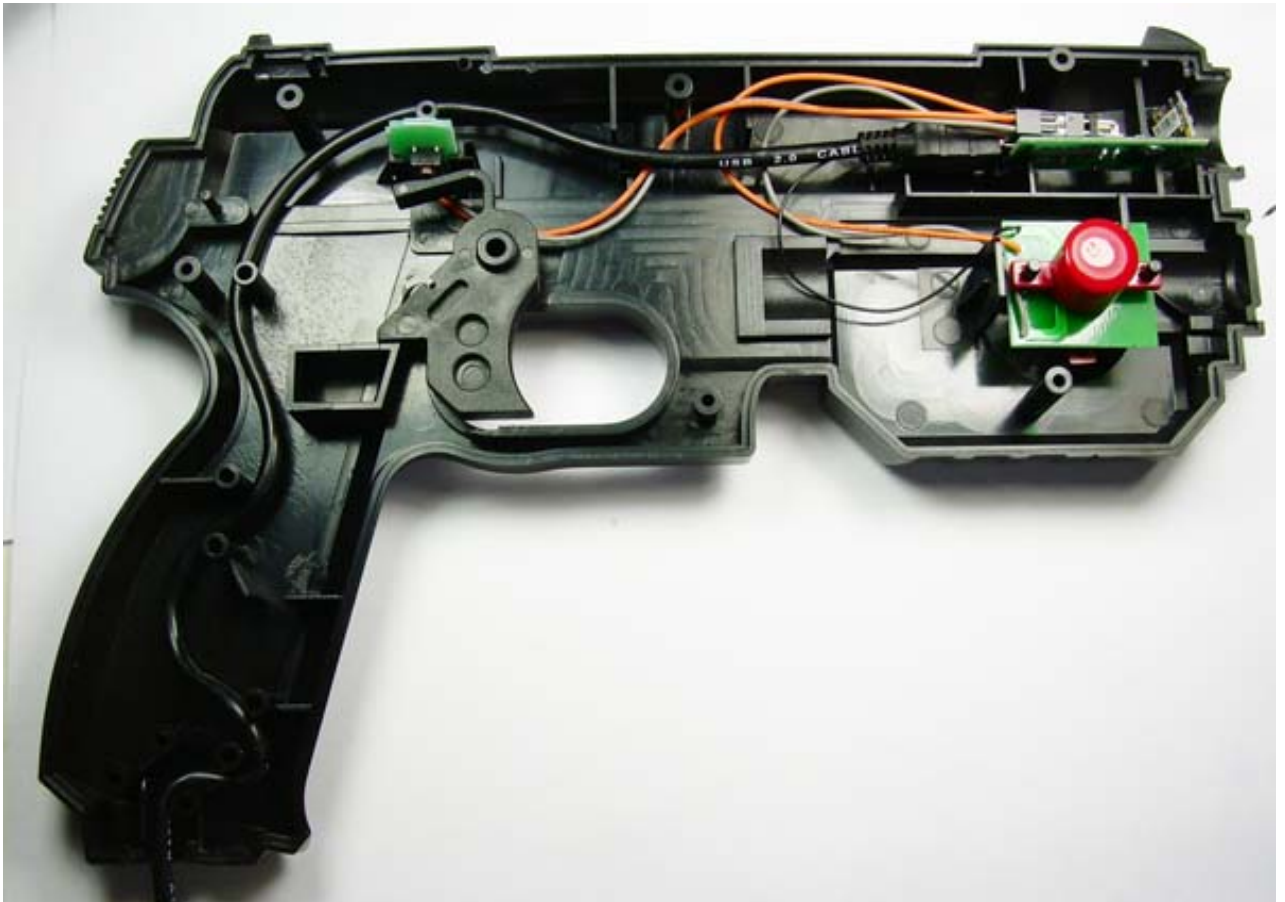

## AIMTRAK

---

Fit the side button PCB with the cutout engaging with the lug on the housing. Then fit the right-hand side button.

Fit trigger as shown. Check that the trigger is free to move and activates the switch.

Arrange the USB cable to snake around the strain-relief pillars.

Ensure none of the wires is resting on any of the internal members of the molding and may be trapped when assembled. Then fit the right-hand side and secure with the 7 screws.
